Description

the Scenario:

AS - IS

- Sarah is a Blind student attending a class in a new building
- She gets in the building but GPS isn't accurate enough to get her to her class room
- She asks people around her for directions
- While moving through the building Sarah could bump into people or objects
- She arrives late after relying on others for help

TO-BE

- Sarah opens Theia on her phone and speaks "Navigate to room 201"
- Theia opens a map of the building uploaded floor plan to make a route
- With audio directions, Sarah is led through the building
- If Theia detects an object and notifies Sarah with a notification(probably with vibration)
- She makes it to room 201 much quicker

Just focusing on giving directions without object detection. Possible ideas for this include a Dijkstra algorithm applied to a grid to navigate a building.

-------	-------------

Description

Scenario:

AS - IS

- David, a visually impaired office employee, is walking through a building corridor after work hours.
- He misjudges the location of a stairwell and accidentally steps too close to the edge.
- With no one nearby, he struggles to regain his bearings and can't easily call for help.
- His caretaker has no way of knowing where he is or that he might be in distress.

TO-BE

- David opens Theia to navigate to the exit.
- As he approaches the stairwell, the app's built-in LiDAR detects a sharp drop-off ahead and warns him through a distinct vibration pattern
- David loses his balance but quickly activates Theia's Emergency Mode by pressing and holding the side button.
- The app automatically sends an alert message with his current location and building coordinates to his registered caretaker.

- The caretaker receives the alert on her phone and is able to locate him immediately, ensuring a fast and safe response.

Focus on a type of fall detection. if unable to use elevation detection in Iphone, then maybe a timer goes off once a finger is off the screen for X amount of time(assume finger is on screen during navigation)

Also, implement contact emergency response once a fall is detected
